

# **Beijing Jiaotong University**

### 2020 Summer Session

# MATH 122 Calculus 2

## **Course Outline**

Term: June 29-July 24, 2020

Class Hours: 14:00-15:50 (Monday through Friday)

Course Code: MATH 122

Instructor: Dr. Calistus Ngonghala

Home Institution: University of Florida, USA

Office Hours: TBA and by appointment

Email: calistusnn@gmail.com

Credit: 4

**Class Hours:** This course will have 52 class hours, including 32 lecture hours, 8 professor office hours, 8 TA discussion session hours, and 4 review session hours.

#### **Course Description:**

Calculus 2 is the second of a sequence of three courses in calculus covering basic concepts of calculus. The course covers integration techniques, applications of integrals, basic differential equations, sequences, and power series.

#### **Course Objectives:**

The objective of the course is to build an understanding of the fundamental principles and applications of integral calculus through lectures, homework, discussions, quizzes and exams.

#### **Required Textbooks:**

Calculus: Early Transcendentals, 8th edition, by James Stewart or the online open source textbook found at http://bit.ly/2vK7UTB.

Grading & Evaluation:		Grae	de Range
Attendance and participation:	10%	А	90-100
Homework and quizzes:	20%	В	80-89
Midterm:	30%	С	70-79
Final:	40%	D	60-69
Total:	100%	F	0-59

### **Course Schedule**

**Week1** *Integration*: Anti-derivative, indefinite integrals, approximating areas, definite integrals, Fundamental Theorem of Calculus, integration formulas, substitutions, integration of logarithmic and exponential functions. Integration by parts, trigonometric integrals and substitutions.

**Week2** *Integration*: Rational fractions, other strategies, improper integrals. *Applications of integration*: Arclength and surface area, area and volume of revolution, work, moment, center of mass.

Week3 *First order ordinary differential equations*: Basic concepts, direction fields, separable equations, exponential growth and decay, logistic equation. *Sequences and infinite series*: comparison and limit comparison test, divergence and integral tests.

Week4 Sequences and series: Alternating series and ratio tests, power series, radius and interval of convergence, Taylor and Maclaurin series

Week	Date		Chapter	Торіс
	Monday			1.1 Anti-derivatives
		1	Integration	1.2 Indefinite integrals
				1.3 Approximating areas
	Tuesday			1.4 The definite integral
1				1.5 Fundamental Theorem of Calculus
		2	Integration	2.1 Integration formulas
			techniques	2.2 Substitutions
	Wednesday			2.3 Integration of logarithmic and exponential functions
				2.4 Integrals resulting in inverse trigonometric functions
	Thursday			2.5 Integration by parts
				2.6 Trigonometric integrals and substitutions
	Monday	2	Integration	2.7 Integrating rational fractions (partial fractions)
			techniques	2.8 Other strategies
				2.9 Improper integrals
2	Tuesday			Mid-term Exam
	Wednesday	3	Applications	3.1 Arc length of a curve and surface area
			of integration	3.2 Area and volume of revolution

#### **Detailed Course Outline:**

	Thursday		3.3 work, moments and centers of mass	
	Monday	4 First order	4.1 Basics of differential equations	
		Equations	4.2 Direction fields	
3	Tuesday		4.3 Separable equations	
			4.4 Exponential growth and decay, logistic equation	
	Wednesday	5 Sequences	5.1 Sequences	
		and	5.2 Infinite series	
		Series		
	Thursday		5.3 Comparison and limit comparison test	
			5.4 Divergence and integral test	
	Monday		5.6 Alternating series test	
			5.7 Ratio and root tests	
4	Tuesday	5 Sequences	5.8 Power series	
		and	5.9 Radius and interval of convergence	
		Series	5.10 Taylor and Maclaurin series	
	Wednesday		Final Exam	
	Thursday		Discussion of final exam	

**Student responsibilities/expectations**: The main course material will be presented through lectures. A discussion session, to be held every Friday will offer an opportunity for students to discuss course material and assigned problems with a teaching assistant (TA). Students are advised to keep pace with the course material as it is being presented. Consequently, students should endeavor to attend all class meetings and discussion sessions, be early for class, and spend sufficient time working on assigned homework problems. If for any reason a student misses a class, he/she should endeavor to obtain the notes and learn the missed material before the next class meeting. Students should not hesitate to ask questions or seek additional assistance to ensure that they are staying on pace with the class. Students will be expected to come to class prepared and ready to participate actively. Please, turn off your cell phones and put aside any unrelated material before class begins. Students should exhibit a sense of responsibility and respect towards fellow students. Late-coming to class or early departure from class meetings will not be allowed.

**Examinations**: There will be one mid-term exam plus one cumulative final exam. Each exam will consist of a multiple choice and a problem (free-response) section. The free-response problem section will contain problems to solve and definitions, brief explanations of concepts, and simple proofs.

**Quizzes**: Quizzes will be administered periodically throughout course period. Quizzes are meant to test the understanding of covered topics, and to give a benchmark prior to the exams.

**Homework**: The purpose of homework is to develop more skills in the material covered. It will be the student's responsibility to solve the assigned homework problems in a timely manner. Students who intend to do well in the course are advised to solve the homework problems. Students should feel free to approach the instructor with difficulties from homework problems. Problems in which students encounter difficulties may also be discussed in class.
